## Purpose

This document provides information on the changes to the United States Postal Service® Address Matching System API (AMS API) for the CASS™ Cycle M release.

It is requested that you implement and evaluate this release of AMS in a test environment at your earliest convenience. You are encouraged to promptly report any problems that you may discover to our Customer Care Department at 877-640-0724, or email us at [amscd.ncsc@usps.gov](mailto:amscd.ncsc@usps.gov).

**Note:** The software has been extended to JULY 31, 2011.

# Interface Changes

## Section Notes:

This section is intended to provide an overview of the changes that have been made to the interface layer of the AMS library. It is advisable for you to review the entire definition of each structure listed in the zip4.h file to better understand the context and extent of these changes.

**None**

## Added Functionality

None

# Bug Fixes

## MULTIPLE FINANCE NUMBER RECORD MATCH

The AMS API would attempt to match to an address within a multiple finance city when an invalid input primary number can be associated with another city within that finance number.

### EXAMPLE

INPUT: 1031-1035 SW 31<sup>st</sup> AVE  
Miami, FL 33135

2.83.01.M: 1031 W 31<sup>st</sup> ST #1035  
Hialeah, FL 33012-5035

2.83.02.M: 1031 SW 31<sup>st</sup> AVE #1035  
Miami, FL 33135-4524
